## 3D Model volume and Surface Area

Create a 3D model comprised of 3 different shapes. This will be done with Play-doh or in Tinkercad. Find the volume and surface area of the composite 3D shape.

Step 1: Brainstorm ideas for 3D shapes you would like to create.

Step 2: Model your shape with Play-doh or on the website www.tinkercad.com

Step 3: Fill in the table with your shapes and measurements.

| Shape Name | Formula (V) | Measurements | Calculations | Volume |
|------------|-------------|--------------|--------------|--------|
|            |             |              |              |        |
|            |             |              |              |        |
|            |             |              |              |        |
|            |             |              |              |        |
|            |             |              |              |        |
|            |             |              |              |        |
|            |             |              |              |        |
|            |             |              |              |        |
|            |             |              |              |        |
|            |             |              |              |        |
|            |             |              |              |        |
|            |             |              |              |        |
|            |             |              |              |        |

| Shape Name | Formula (SA) | Measurements | Calculations | Surface Area |
|------------|--------------|--------------|--------------|--------------|
|            |              |              |              |              |
|            |              |              |              |              |
|            |              |              |              |              |
|            |              |              |              |              |
|            |              |              |              |              |
|            |              |              |              |              |
|            |              |              |              |              |
|            |              |              |              |              |
|            |              |              |              |              |
|            |              |              |              |              |
|            |              |              |              |              |
|            |              |              |              |              |
|            |              |              |              |              |
